Provider Guidelines

BRIEF SCREENING, INTERVENTION, AND REFERRAL FOR ALCOHOL AND OPIATE DISORDERS

Alcohol and Drug Screening and Brief Intervention: A Three-Step Process

• Screen
• Brief Intervention
• Follow-up

The Problem

• According to the National Institute on Alcohol Abuse and Alcoholism 3 in 10 adults drink at levels that elevate their risk of physical, mental health, and social problems.¹
• Heavy drinking increases the risk of gastrointestinal bleeding, hypertension, hemorrhagic stroke, cirrhosis of the liver, major depression, sleep disorders, and cancers of the head and neck, digestive tract, and breast.²
• The misuse (use of prescription-type drugs not prescribed for the individual by a physician or used only for the experience or feeling they caused) of opioid pain relievers is a growing public health problem.
• An estimated 48 million people have used prescription drugs for nonmedical reasons in their lifetime.³

The Solution

Primary care physicians and behavioral health care providers are in the best position to identify and begin address hazardous drinking and drug misuse.

The U.S. Preventive Services Task Force (USPSTF) recommends screening and behavioral counseling interventions to reduce alcohol misuse by adults, including pregnant women, in primary care settings.

The USPSTF found good evidence that screening in primary care settings can accurately identify patients whose levels or patterns of alcohol consumption do not meet criteria for alcohol dependence but place them at risk for increased morbidity and mortality, and good evidence that brief behavioral counseling interventions with follow-up produce small to moderate reductions in alcohol consumption that are sustained over six- to 12-month periods or longer.

SCREEN

Routine screening is a quick and simple way to identify patients who are engaged in risky or dependent drinking or drug misuse. Screening allows the care provider to educate their patients about the hazards of heavy drinking or drug misuse, identify problems before serious dependence develops, and motivate their patient to change their behavior.¹

Screening Tools for Alcohol and Drugs

Alcohol Use Disorders Identification Test (AUDIT) — a screening tool developed by the World Health Organization to identify persons with hazardous or harmful alcohol consumption.² The AUDIT consists of 10 items that can be administered quickly either verbally, written, or by computer in ~5 minutes. The AUDIT-C (AUDIT items 1-3) can be administered in ~1-2 minutes as a prescreener to determine if further screening (items 4-10) is needed.

The Drug Abuse Screening Test (DAST) — The DAST was designed to provide a brief and simple method for identifying individuals who are abusing psychoactive drugs and to provide an assessment of the degree of problems related to drug use or misuse.
**AUDIT AND DAST PRESCREENER**

<table>
<thead>
<tr>
<th>AUDIT C</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. How often do you have a drink containing alcohol?</td>
<td>Never</td>
<td>Monthly or less</td>
<td>2-4 times per month</td>
<td>2-3 times per week</td>
<td>4 or more times per week</td>
<td></td>
</tr>
<tr>
<td>2. How many drinks containing alcohol do you have on a typical day of drinking?</td>
<td>1 or 2</td>
<td>3 or 4</td>
<td>5 or 6</td>
<td>7 to 9</td>
<td>10 +</td>
<td></td>
</tr>
<tr>
<td>3. How often do you have five or more drinks on one occasion?</td>
<td>Never</td>
<td>Less than monthly</td>
<td>Monthly</td>
<td>Weekly</td>
<td>Daily or almost daily</td>
<td></td>
</tr>
</tbody>
</table>

A standard drink in the US is any drink that contains about 14 grams of pure alcohol. One drink = 12oz. beer, 5oz. wine, 1.5 oz. liquor

**AUDIT-C Score (add items 1-3)**

**Recommended Level and Focus of Brief Intervention based on Screening Results:**

- **NEGATIVE SCREEN < 4 for men / 3 for women** – Inform client that they are at low risk. Congratulate clients at low risk and encourage them to remain that way. Simple Advice can be offered.

- **POSITIVE SCREEN ≥ 4 for men / 3 for women** - Inform client that they screen positive for hazardous alcohol use and are at risk for health and other problems – continue with the full AUDIT.

<table>
<thead>
<tr>
<th>DAST Pre-screener</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In the past 12 months, have you used drugs other than those required for medical reasons?</td>
<td>Yes or No</td>
</tr>
</tbody>
</table>

A yes response to the DAST pre-screener indicates a positive drug prescreen – continue with full DAST.

<td></td>
</tr>
</tbody>
</table>

AUDIT Score (add items 1-10)

**Scoring:** Questions 1–8 are scored 0, 1, 2, 3, or 4 points. Questions 9 and 10 are scored 0, 2, or 4 only. A score of 8+ on the AUDIT generally indicates at-risk, harmful, or hazardous drinking.

**DAST-10©**

The questions included in the DAST-10 concern information about possible involvement with drugs not including alcoholic beverages during the past 12 months.

In the statements, “drug use” refers to (1) the use of prescribed or over the counter drugs in excess of the directions and (2) any non-medical use of drugs.

In the past 12 months: Circle response

\(^1\)1982 by the Addiction Research Foundation. Author: Harvey A. Skinner Ph.D. Developed on 07/15/2008.

BRIEF INTERVENTION

Brief intervention is effective and efficient way to intervene with patients who report risky or hazardous alcohol and/or drug use. Patients with alcohol and drug misuse problems typically appreciate health care providers who express concern about their drinking and drug use.

Brief intervention, which usually happens in a single session immediately following a positive screen, consists of a motivational discussion with the patient. This discussion is focused on increasing insight and awareness regarding the impact of substance use and motivation for behavior change. For patients identified as needing more extensive treatment than just a brief intervention, the provider can refer the patient to specialized substance use treatment.

In a brief intervention, the health provider expresses medical concern about a patient’s drinking; advises the patient to cut down his or her drinking or drug use, or in the case of a person with alcoholism, to stop drinking.

Brief Intervention Method

FLO: Feedback, Listen and Understand, Options explored\(^7\)

“F” FEEDBACK USING AUDIT-C, AUDIT, DAST (1-2 minutes)

--- Range: AUDIT-C can range from 0 (non-drinkers) to 12 (hazardous, harmful, risk use of alcohol); AUDIT can range from 0 (non-drinkers) to 40 (hazardous, harmful, risk use of alcohol); DAST can range from 0 (non drug misuse) to 10 (serious drug misuse).

--- AUDIT and DAST has been given to thousand of patients in medical settings, so you can compare your drinking to others.
Normal AUDIT-C scores are 0-4 for men and 0-3 for women, which is low-risk drinking; Normal DAST score is 0.

Give result: Your score was…which places you in the category for higher risk of harm.

Elicit reaction: What do you make of that?

‘L’ LISTEN AND ELICIT (1-5 minutes)

Explore pros and cons of drinking or drug use (What do you like about drinking? What do less about drinking?)

Summarize both sides (On the one hand…On the other hand…)

Ask about importance. (circle #) On a scale of 1-10, how important is it to you to… (change)? Why did you give it that number and not a lower number? What would it take to raise that number?

1 – 2 – 3 – 4 – 5 – 6 – 7 – 8 – 9 – 10
Not at all Important Very Important

Ask about confidence. (circle #) On a scale of 1-10, how confident are you that you can change successfully? Why did you give it that number and not a lower number? What would it take to raise that number?

1 – 2 – 3 – 4 – 5 – 6 – 7 – 8 – 9 – 10
Not at all Important Very Important

“One” OPTIONS (Goal Setting) 1-5 minutes

Ask key questions about what they want to change, what is their goal
(Where does this leave you? Do you want to quit? Cut down? Make no change?)

Manage your drinking/drug use
Eliminate drinking/drug use from your life
Never drink/use drugs and drive
Utterly nothing
Seek help
Other goals ________________________________________________________________

(If appropriate) ask about the plan (How will you do that? If you wanted to…how would you? Who will help you? What might get in the way?)

CLOSE ON GOOD TERMS <1 minute

Summarize Patient’s statements in favor of change
Emphasize their strengths
What agreement was reached

EDUCATION AND REFERRAL

Give patient brochures “Alcohol: It may be legal but it can hurt your health” and/or “When pain medications
become another problem”

Circle Behavioral Health Service Provider on back of brochure “Alcohol: How much is too much?” - select based on payor (i.e., health plan, self/uninsured)

FOLLOW-UP

Patient outcomes improve when follow up is provided. A phone call soon after the brief intervention to assess patient progress will reinforce the intervention. In cases where a referral is given to the patient, the physician or clinician should check to see if the patient initiated contact.
